

Artem Antonevych

Data Analyst

Data analyst with **1.5 years of experience**, focused on **data quality** – because a dashboard is only as good as the data feeding it. I **collect, validate and normalize** data from multiple sources, spot **anomalies and errors** most people miss, and ship clear reports and dashboards (Google Sheets, Tableau, Looker Studio). At 4bill.io I automated daily data checks and reporting that removed **~5 hrs of manual work/week**, and built a **real-time dashboard** adopted by the entire team that **cut analysis time ~50%**. Strong in **SQL (SELECT/JOIN, optimization)** and **Python (pandas, NumPy)**, comfortable with **large data volumes** – and most at home when a dataset isn't giving up its answer easily.

EXPERIENCE

Anti-Fraud Analyst

4bill.io · Payments · Remote

Sep 2025 – Jun 2026

- Built an interactive real-time **fraud dashboard** (hourly for the current day, daily review of the prior day, with alerts), adopted by the entire team – cut analysis time **~50%** and dropped fraud-response latency from several hours to **under 1 hour**.
- Automated daily multi-accounting detection & recurring reporting with **n8n** + Python – eliminated **~1 hour of manual work per day** (~5 hrs/week), freeing the team to focus on investigation.
- Analyzed fraud patterns across IP, device fingerprints, BINs, geolocation & velocity (**SQL** on Athena + PostgreSQL, and **Python**), tracking **TPR / FPR**, precision & recall – turning findings into new prevention rules and anti-fraud strategies.
- Ran **cohort analysis** to profile fraudster behaviour before activity, building fraudster portraits that reduced false negatives and undetected fraud.

Data Analyst – Freelance

Independent Projects · Remote

Feb 2025 – Sep 2025

- SQL**: global email-engagement & account-creation analysis – multi-country segmentation and aggregated metrics (sends, opens, clicks, signups).
- Python**: multi-year retail sales EDA – cleaned and joined 3 datasets; geographic heatmaps, delivery-delay and weekday seasonality analysis.
- Strong in **SQL** (SELECT/JOIN, optimization) and **Python** (pandas, NumPy) – comfortable with large data volumes.

SELECTED PROJECTS

PYTHON

Global Retail Sales – Multi-Channel EDA

Cleaned and joined three datasets for a full EDA – time trends, geographic heatmaps and seasonality – surfacing revenue patterns, profit margins and delivery-delay insights. ➤ github.com/Antoneva98

SQL

Email Engagement & Account Creation

Multi-country SQL analysis combining engagement metrics with segmentation for user-level insight – identifying top-performing segments and underperforming regions. ➤ github.com/Antoneva98
